TCMHCC Resource Vetting Process

Effective July 6, 2026

All resources submitted to the centralized database utilized by TCMHCC HRI teams undergo a standardized vetting process to:

- Confirm all required fields are completed
- Verify that information is entered in the correct format
- Ensure the resource is categorized appropriately

Direct outreach to the resource provider is conducted to validate key submission details, including services offered, payment types accepted, and any information that is incomplete, unclear, or inconsistent.

Upon completion of the review, the resource status and approval date are documented within the platform. Resources that cannot be fully validated are not made available until all required information is confirmed.

Additionally, prior to sharing a resource with a requesting provider or family, the information is reverified to ensure the resource remains active and current.
